SUMMARY

Fullstack Developer with 3+ years building and shipping complete web products from scratch — not just features. Founder and sole developer of a São Paulo-based services company, owning every technical decision from stack to deployment, plus Python automation tools (web scrapers, autonomous Telegram bots on GitHub Actions) that solve recurring problems. After years working mostly solo, looking to grow within a team and bring that end-to-end ownership to something bigger. Advanced English, open to full-time remote roles with US/EU timezone overlap.

TECHNICAL SKILLS

Frontend React 19, Next.js 15, TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass, Tailwind CSS, responsive design

Backend Node.js, Express, Python, FastAPI, Flask, REST APIs, Nodemailer, third-party API integration

Databases SQL, SQLite, SQLAlchemy (ORM)

Automation BeautifulSoup, Selenium, Telegram Bot API, web scraping, scheduled jobs

DevOps Vercel, GitHub Actions (CI/CD), Git, environment management, end-to-end deployments

Practices SEO, Google Tag Manager, performance optimization, clean code, end-to-end ownership

Languages English (advanced) · Portuguese (native) · Spanish (intermediate)

PROFESSIONAL EXPERIENCE

Fullstack Developer & Founder 2023 – Present

RT Polimento Técnico Delivery · São Paulo, Brazil · Remote · rtpolimentotecnicodelivery.com.br

- Founded the business in 2018 and rebuilt its entire web presence from a No-Code site into a custom Next.js 15 / React 19 application (2023–2024), now maintained in production on Vercel — sole developer owning every decision from architecture to deployment.
- Replaced a fully manual quote process with an automated request-to-email flow (Nodemailer, no third-party form service), delivering every lead instantly to the business inbox and removing all manual handling.
- Engineered a fully custom UI with no component library: three adaptive navigation modes and a fullscreen media gallery with keyboard control and scroll locking — full ownership of UX.
- Instrumented SEO and Google Tag Manager to make the site discoverable and capture real user-behavior data, using it to drive iterative product decisions.

Weighbridge Operator Sep 2018 – Nov 2023

Grupo EcoRodovias · São Bernardo do Campo, Brazil

- Conducted overweight-cargo enforcement at a highway weigh station, managed consumable supplies, and trained new team members. Concurrent role held while bootstrapping RT Polimento and self-teaching software development.

FEATURED PROJECTS

rt-tech-polish — Production company website · rtpolimentotecnicodelivery.com.br · github.com/RiccoOrnelas/rt-tech-polish
Next.js 15 · React 19 · App Router · CSS Modules · Nodemailer · Vercel — custom responsive UI, no component library, auto-deploy on push.

brainOrganization — Daily Planner Bot · github.com/RiccoOrnelas/brainOrganization

Python · openpyxl · Telegram Bot API · GitHub Actions

- Reads a weekly .xlsx schedule and sends a formatted Telegram briefing every morning at 7 AM via GitHub Actions cron.
- Zero external HTTP dependencies (Python's built-in urllib only); credentials via GitHub Secrets, never hardcoded.

hackerNews_telegram_automation — HN + Who-is-Hiring bot · github.com/RiccoOrnelas/hackerNews_telegram_automation

Node.js · Telegram Bot API · GitHub Actions · axios · HN public API

- Serverless bot delivering daily HN top stories and Who-is-Hiring listings at 6:30 AM (Brasília) — running for 2 months with zero intervention and zero infrastructure cost.

EDUCATION

Fullstack Web Development Apr 2021 – May 2022

OneBitCode · Online

Intensive vocational program in modern fullstack development: React, Node.js, databases, and deployment.

Associate Degree in Information Technology Management Jan 2011 – Jul 2013

Anhanguera Educacional · São Paulo, Brazil

Higher education foundation in IT, systems, and programming logic.
